The Monthly Employment Report

June 2025

Prepared by Anneliese Vance-Sherman, chief labor economist

On a seasonally adjusted basis, preliminary estimates from the Bureau of Labor Statistics (BLS) show nonfarm employment in Washington increased by 10,900 in June 2025.^a Employment in the private sector increased by 6,300 jobs over the month and employers in the public sector increased by 4,600.

On a not seasonally adjusted basis, estimates for June 2024 through June 2025 show an increase of 1,900 jobs statewide. Employers in the private sector collectively added 6,100 jobs while the public sector shed an estimated 4,200 jobs over the year.

Washington's preliminary seasonally adjusted unemployment rate for June 2025 was 4.5%, unchanged from the estimated unemployment rate for May. For reference, the unemployment rate in June 2024 was 4.5%.

BLS estimates of monthly job gains and losses are based on a survey of businesses. Preliminary estimates are subject to revision.

For more information, contact Anneliese Vance-Sherman by phone at 564-900-0748 or by email at [anneliese.vance-sherman\(5\)esd.wa.gov](mailto:anneliese.vance-sherman(5)esd.wa.gov).

^a Most of the employment numbers in this report refer to jobs, not people. For example, if a person holds two positions, these positions are counted as two jobs in the employment series. In the unemployment section, these positions refer to individuals, not jobs. In this case, a person holding two jobs is counted only once.

Resident civilian labor force and unemployment, seasonally adjusted

The resident civilian labor force is the total number of people in the workforce, employed and unemployed, ages 16 and older.

The number of unemployed is the estimated number of people who currently do not have a job, are available for work and have actively looked for work in the last four weeks.

The unemployment rate is the ratio of the estimated number of unemployed divided by the civilian labor force.

Figure 1: Resident civilian labor force and unemployment, seasonally adjusted, United States and Washington state, May and June 2024 and May and June 2025

United States	June 2025 preliminary	May 2025 revised	June 2024 revised	May 2024 revised

Office of Financial Management, Forecasting and Research Division

1. Natural increase is the difference between the number of live births and the number of deaths.
2. Residual net migration is calculated as population change minus the amount of natural increase.
3. Births and deaths are estimated for the most recent years due to a lag in reporting. The historical series may be revised in cases where more accurate data becomes available.
4. Migration trends may not be reliable for smaller counties or counties with characteristics that make them difficult to estimate accurately. Erratic gains and losses are often apparent. Using a three year rolling average might stabilize migration estimates for smaller counties and those showing erratic trends.
5. Data sources: Office of Financial Management April 1 population estimates, U.S. Census Bureau decennial census counts, and vital statistics from the Washington State Department of Health.
